

Universal wall mount, max 436x600mm. 125kg

The MD 052B1010 is a wall mount with longer brackets (63cm) which makes it ideally suitable for mounting small to medium sized large format displays in portrait orientation. Included with the wall mount is a special safety bar to securely fasten your display. Padlock not included. All universal wall mounts are VESA compatible and come with fastening materials necessary to secure the mount to the display. Besides wall mounting, our wall mounts can be used for ceiling mounting in combination with a tube set, and directly fastened to the stand thanks to its 170 x 140 mm mounting pattern.
